**OPPORTUNITIES IN RESEARCH & DEVELOPMENT**

**CABLE DESIGN ENGINEER**

The cable design specialist is responsible to manage the product design and costing for existent as well as enhanced products. You have accountability for the final materials choice (through BOM), dimensions and machine choice (routing) validating all data with materials engineers, materials laboratory, purchasing, supply chain and process engineers. You also evaluate and propose innovative ideas for customers, application driven products and product enhancements.

**MATERIALS ENGINEER**

The materials engineer is responsible to develop new raw materials or compounds or reengineer existent ones, following cable design or product development engineers’ inputs. You collaborate with the Operations team to ensure that materials run with right quality and processability throughout our internal value chain. You lead materials testing, qualifications, raw material specifications, recipe management. You technically support the Purchasing team in developing new suppliers, you contribute to generate savings (Design-to-Cost) and ensure quality in the plants as well as efficiency (low scrap, high speed, etc.).

**PRODUCT DEVELOPMENT ENGINEER**

The product development engineer is responsible to develop new products or reengineer existent ones, in accordance with international standards, customer specifications and local business strategy. You act as project leader coordinating all engineering-related activities with cross-functional teams to ensure that the project is executed according to the agreed timeline and deliverables. You also provide technical support to Sales, Marketing and Operations departments during the whole product lifecycle.

**TESTING LABORATORY ENGINEER**

The testing engineer is responsible to conceptualize, plan, execute, gather data, analyze and produce a sound output for the current testing on cable systems, aiming to assess their capability to withstand several phenomena (mainly electrical, mechanical & thermal). You set up optimized test circuit, using adequate measure instruments which shall comply with the existent test and qualification procedures fulfilling all the required group and local safety protocols. You liaise with internal customers/engineering teams and often with external customers and certification bodies. You take a hands-on approach in running testing activities on-site and analyzing test results with a scientific mindset.

**OPPORTUNITIES IN FINANCE**

**PLANNING & REPORTING SPECIALIST**

The planning & reporting specialist assists in the preparation of monthly and annual forecasts and budget for internal and external stakeholders. You analyze monthly revenues, costs, KPI’s and work with the business to provide insightful analysis towards budgets and prior year variances, providing recommendations. You also work closely with other functions (Operations, HR, Supply Chain) to understand and evaluate key business trends/ratios and to ensure the accuracy of financial reported results budgets.

**JUNIOR INDUSTRIAL CONTROLLER**

The junior industrial controller ensures timely and relevant business analysis, providing insightful recommendations in order to lead the business to better performance. You cooperate with the Operations and Logistics teams to improve visibility on KPI’s like product costing, overhead, labor efficiency/utilization. You lead budgeting and improve current inventory control processes (Cycle Count Program, Monthly Physical count, Scrapping, Excess & Obsolete).
Typical available positions at the end of your job rotation

**OPPORTUNITIES IN OPERATIONS**

*PROCESS & CONTINUOUS IMPROVEMENT ENGINEER*

The process & continuous improvement engineer is responsible for initiating, coordinating and implementing manufacturing improvement initiatives on a wide range of topics, processes and flows. You integrate Lean Sigma improvement methodologies within the value stream and serve as a generator of ideas for process improvement techniques. In addition, you will provide daily support for process troubleshooting and product quality, along with the coordination of the resources required to implement process improvements.

*QUALITY ENGINEER*

The quality engineer develops and maintains effective systems to achieve quality objectives and meet compliance. You lead plant efforts to maintain quality requirements and certification. You evaluate trends using statistical analysis and collaborate with other departments in the development of corrective actions. You investigate, evaluate, and report returned product from customers. Interact with suppliers as needed for audits, certifications and purchased material concerns.

*BUYER*

The buyer is responsible for managing sourcing and procurement activities for the assigned projects, services, commodities, with a strict monitor of all major targets: price, quality, risk, time etc. You work closely with all departments to ensure plant running without interruptions and purchases are done by technical specifications, supporting project delivery. In addition, you manage and optimize the supplier base in order to improve value for money and reduce risks.

*PLANNER*

The demand planner ensures our company’s operations are timely, efficient, and cost-effective. You will assist in all demand planning duties, including estimating future product demand, analyzing inventory flow, and developing forecast models. In close coordination with the Sales team, you understand the business logistics requirements and production characteristics in order to create value for customers.

*JUNIOR PROJECT MANAGER*

The junior project manager supports the project’s planning, preparation, execution and finalization in accordance with the customers’ contractual terms and specifications, within the agreed timescales and budget. This includes helping the project team to reach targets and defined goals, dealing with third-party contractors and external consultants. You also support the achievement of clear project objectives, contributing to build the project requirements and identify the constraints cost, time, scope, and quality.

*SYSTEM DESIGN ENGINEER*

The system design engineer offers technical solutions related to the AC/DC Land and Submarine Cables Systems (Cables and Accessories). You design a competitive technical solution for the specific application and provide design reports including Electrical, Thermal and Mechanical verifications of cables. You identify testing and qualification requirements. In addition, you contribute to the identification of Root Cause Analysis in case of Non-Conformities or faults.
Typical available positions at the end of your job rotation

OPPORTUNITIES IN SALES & MARKET ANALYSIS

- **TECHNICAL SALES SUPPORT SPECIALIST**

  The technical sales support specialist provides a technical support link between the Sales and R&D teams. You provide technical support for tenders and to the internal sales team on product selection. You lead practical product demonstrations and deliver trainings to customers as required. You calculate cost for product variant, maintain product datasheets and identify product portfolio gaps.

- **MARKET INTELLIGENCE DEVELOPMENT SPECIALIST**

  The Market Intelligence Development Specialist gathers and evaluates relevant market and competitor information to review market position and determine threats and opportunities. You review and summarize industry reports, maintaining an advanced knowledge of trends affecting the industry. You identify and recommend strategic solutions to support future growth, keeping contact with customers and industry stakeholders.

- **JUNIOR PRODUCT MANAGER**

  The junior product specialist develops and implements the product category management approach. You support local commercial organizations providing market intelligence information (market trends and competitive scenario monitoring) for the assigned product lines. You provide guidance to R&D for the definition of product development roadmaps. You also provide technical sales support to customers and to sales force.

- **JUNIOR SALES MANAGER**

  The junior sales manager has hands-on responsibility for developing and driving sales. You implement sales strategies through effective, targeted channel management. You build lasting and influential relationships with customers and with the Operations Team.
