

Elevator cable systems that are **halogen-free*** from end to end

Draka travelling cables and installation components are tested to be halogen-free. These include:

Flat cable glands

These include over two dozen HF plastic glands and zinc glands with various opening sizes.

Halogen-free flat travelling cables

Draka offers several cable designs (both parallel and combination constructions, such as H05ZZH6-F, D05Z1Z1H6-F, FLi-2YS(ST)(C)TH, etc.) with signal and data capability, all which meet relevant HF safety standards.

Connectorization

All Draka cables come with connectorization as an option.

Hanging hardware

All cable hanging devices are made from HF materials to support a safe environment in case of fire.

* Halogen-free as by IEC 60754-2: Test on gases evolved during combustion of materials from cables.
