

Performance Measurement

SAFETACH™ ELEVATOR PERFORMANCE METER

Maxton SafeTach™ Elevator Performance Meter

Part Number	Description
SAFETACH	SafeTach performance meter, with carrying case, with remote device
SAFETACH-0	SafeTach performance meter, with carrying case, no remote device
SAFETACH REMOTE	SafeTach remote device

SafeTach detects, displays, and records up to three runs of critical operational data: elevator speed, duration of run, G-forces/rates during start, acceleration, deceleration, stop rate, and the peak jerk (changes in acceleration).

SafeTach's simple operation gives you all essential data from outside of the hoistway. SafeTach does this safely, with only one technician, from inside the cab.

SafeTach self-calibrates on every run - no additional adjustment needed.

Benefits

- No need for technicians to shut down service to measure elevator performance
- Dramatically reduces setup and adjustment time
- Review elevator performance quickly, in the time it takes to ride between floors
- Evaluate any elevator safely
